NOTE:

These Opel vehicles do not feature a 12v ignition feed to the Head-Unit. The replacement unit will need to be manually turned off (or face panel removed) when the user exits the vehicle. If desired an ignition input can be added by disconnecting the bullet connector on the red wire (Harness A) and adding a flying lead to take this to a true ignition feed (Normally located at the Ignition barrel or fuse box).

*Functions Given are a general guide, exact functionality may vary with Kenwood Model/Vehicle
